## Assignment -2

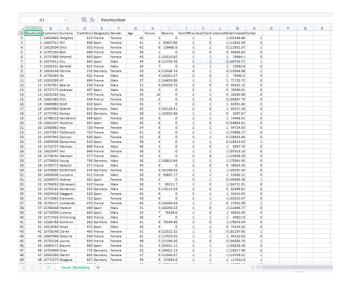

## DATA VISUALISATION AND PRE-PROCESSING

Assignment Date	28 September 2022
Student Name	Hariputhiran A
Student Roll Number	612419104013
Maximum Marks	2 Marks

# Question-1:

Download the Dataset

## Solution:

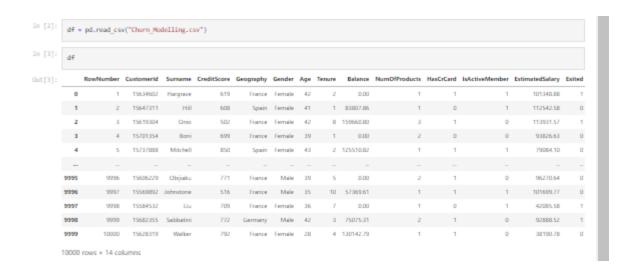

# Question-2:

Loading dataset

## **Solution:**

df = pd.read\_csv("Churn\_Modelling.csv")

df

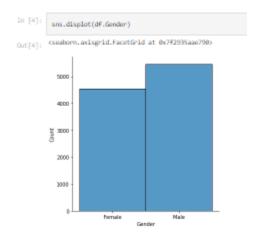

## Question-3:

1. Visualizations

a) Univariate Analysis

## **Solution:**

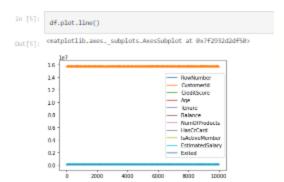

sns.displot(df.Gender)

b) Bi - Variate Analysis

## **Solution:**

df.plot.line()

C)Multi - Variate Analysis

#### **Solution:**

sns.Implot("Tenure","NumOfProducts",df,hue="NumOfProducts", fit\_reg=False);

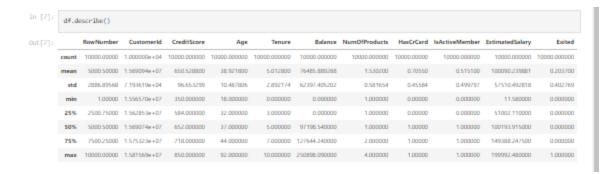

## Question-4:

Perform descriptive statistics on the dataset.

## **Solution:**

df.describe()

#### Question-5:

Handle the missing values

#### **Solution:**

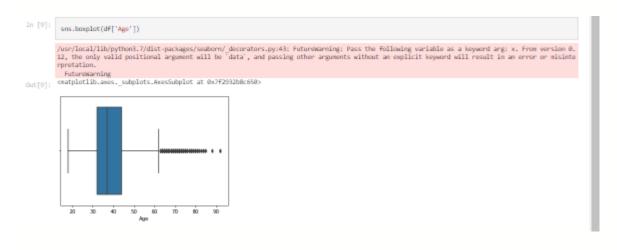

data = pd.read\_csv("Churn\_Modelling.csv")
pd.isnull(data["Gender"])

#### Question-6:

Find the outliers and replace the outliers.

#### Solution:

sns.boxplot(df['Age'])

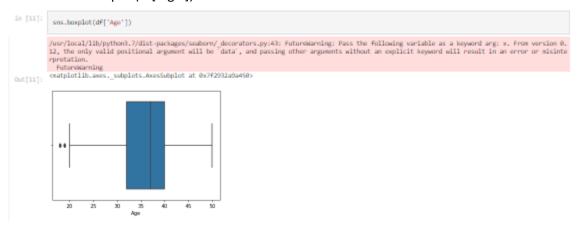

#### Solution:

```
df['Age']=np.where(df['Age']>50,40,df['Age'])
df['Age']
```

## **Solution:**

## sns.boxplot(df['Age'])

#### **Solution:**

## Question-7:

Check for Categorical columns and perform encoding.

### **Solution:**

```
pd.get_dummies(df, columns=["Gender", "Age"], prefix=["Age", "Gender"]).hea
```

### **Question-8:**

. Split the data into dependent and independent variables.

a)split the data into independent variables.

## **Solution:**

X = df.iloc[:, :-1].value

b)split the data into dependent variables

#### **Solution:**

#### Question-9:

Scale the independent variables

## **Solution:**

import pandas as pd
from sklearn.preprocessing import MinMaxScaler
scaler = MinMaxScaler()
df[["CustomerId"]] = scaler.fit transform(df[["CustomerId"]])

```
import pandas as pd
from sklearn.proprocessing import MinMauScaler
scaler = MinMauScaler()
df[["Customerid"]] = scaler.fit_transform(df[["Customerid"]])
In [17]: print(df)
                                                               Surname CreditScore Geography Gender

## Question-10:

Split the data into training and testing

### **Solution:**

```
from sklearn.model_selection import train_test_split
train_size=0.8
X = df.drop(columns = ['Tenure']).copy()
y = df['Tenure']
X_train, X_rem, y_train, y_rem = train_test_split(X,y, train_size=0.8)
test_size = 0.5
X_valid, X_test, y_valid, y_test = train_test_split(X_rem,y_rem, test_size=0.5)
print(X_train.shape), print(y_train.shape)
print(X_valid.shape), print(y_valid.shape)
print(X_test.shape), print(y_test.shape)
```

```
In [18]:
    from sklearn.model_selection import train_test_split
        train_size=0.8
        X = dF.drop(columns = ['Tenure']).copy()
        y = dF['Tenure']
        X train, X rem, y train, y rem = train_test_split(X,y, train_size=0.8)
        test_size = 0.5
        X valid, X test, y valid, y test = train_test_split(X_rem,y_rem, test_size=0.5)
        print(X_train.shape), print(y_train.shape)
        print(X_valid.shape), print(y valid.shape)
        print(X_test.shape), print(y_test.shape)
